

ASX ANNOUNCEMENT

8 February 2022

ChemX Joins the Global Battery Alliance

Key Highlights

- ChemX has joined the Global Battery Alliance (GBA), an umbrella partnership made up of over 90 members working towards establishing a sustainable and responsible battery value chain globally.
- GBA brings together all parts of the battery value chain - including companies, governments, researchers and NGOs - to develop and coordinate a sustainable battery industry.

ChemX Materials (ASX:CMX) (ChemX or the Company), a materials technology company focused on providing critical materials required for electrification and decarbonisation, is pleased to advise that it has joined the Global Battery Alliance (**GBA**).

The GBA (www.globalbattery.org) is a public-private collaboration established in 2017 at the World Economic Forum, with the aim of driving a sustainable battery value chain and the progressive reduction of greenhouse gas emissions. The guiding principles of the GBA are to:

- Establish a circular battery value chain as a major driver to achieve the Paris Agreement
- Establish a low carbon economy in the value chain, create new jobs and additional economic value
- Safeguard human rights and economic development consistent with the UN Sustainable Development Goals

ChemX will be participating in advancing projects and initiatives of the GBA including the Battery Passport program. The Battery Passport program will have a full history of the ESG performance of each component of the battery to ensure a sustainable battery value chain.

ChemX Managing Director, David Leavy, commented:

“The aims and values of the GBA align well with the values of ChemX. We have a number of materials under development through our HiPurA™ technology and the Jamieson Tank Manganese Project that are part of the battery supply chain. The HiPurA™ technology minimises our impact on the environment by reducing the energy requirement to produce HPA and also being able to significantly reduce the logistics chain by establishing facilities close to end users.”

ChemX is proud to be part of the GBA and ensuring the development of the battery value chain is a net positive for society, the environment and the economy.

This Announcement has been authorised for release by the Board.

About ChemX Materials (ASX: CMX)

ChemX Materials is a materials technology company focused on providing critical materials required for electrification and decarbonisation. The company's vision is to support the energy transition with materials and technology that provide real solutions to lowering carbon emissions.

Developed in-house, ChemX's HiPurA™ Process is a unique technology that is capable of producing high purity alumina (HPA) and high purity aluminium cathode precursor salts for lithium-ion batteries. Initial testwork has indicated that the process is low cost and low in energy consumption, compared to alternative technologies. A key competitive advantage is that the HiPurA™ process is not tied to mine production, with the feedstock being a widely available chemical.

The Company has projects in South Australia and Western Australia.

The South Australian Eyre Peninsula projects include the Kimba Kaolin-Halloysite Project and the Jamieson Tank Manganese Project. The ChemX HiPurA™ Project is located in Western Australia.
